

Niobrara SN1 Cable

The Niobrara SN1 Cable is intended to connect one SY/NET[®] device to another SY/NET device. The SN1 is functionally equivalent to a 6 foot CC-201 cable. The cable ends feature NS211 twinax ends (CCK211 equivalent) like those used on the CC-201.

The standard SN1 is 6 feet long but it can be supplied in any length up to 2,000 feet. To order a custom length SN1 use the part number SN1-xx where xx is the length of the cable in feet. There is an additional charge for custom length cables; see price list for more information.

Installation:

1. Connect one cable end to the processor, NIM, or other device by inserting cable end and twisting knurled ring until lugs engage.
2. Connect the other cable end to the other SY/NET compatible device.
3. Refer to documentation for the connected products.
